Your Name

City, Region ◇ +1 (555) 555-5555 ◇ hello@example.com ◇ LinkedIn ◇ GitHub

Experience

Company A – City, Region **Month Year – Present**
Machine Learning Engineer

- Trained [model] to predict [target] from [data]; compared it with [simple baseline] on a held-out [time period or entity group], reporting [metric] and [important slice].
- Removed [feature unavailable at prediction time] from training; rebuilt features with point-in-time joins and checked them against logged serving inputs.
- Deployed [model] through [batch job or inference service]; versioned preprocessing with the model and tested missing features and rollback to [previous version].
- Added alerts for [stale features or missing predictions] and tracked [quality metric] as labels arrived; used [failure threshold] to trigger [fallback or investigation].

Company B – City, Region **Month Year – Month Year**
Software Engineer

- Built [data pipeline] with schema checks and replay-safe writes; reconciled [counts or aggregates] after backfilling [date range].
- Profiled [inference bottleneck] under [batch size, hardware, and load]; changed [component], reducing p95 latency from [A] to [B] ms in a load test.

Projects

[Prediction project] **[Month Year]**
[Course or personal] project; [Language and library]

- Split [dataset] by [time or entity] before fitting preprocessing; selected [model settings] on validation data and evaluated once on the reserved test set.
- Compared [model] with [baseline] using [metric and units]; published [code or report] with data splits, settings, and [failure case].

Skills

- **Languages**: [Language], [Language].
- **Modeling**: [Training library], [Model family used], [Evaluation method used].
- **Data & Serving**: [Data tool], [Inference runtime], [Deployment platform].

Education

[University] – [City, Region] **[Graduation Month Year]**
[Degree and Major]
