Alex Morgan

Toronto, Ontario ◇ +1 (416) 555-0123 ◇ alex.morgan@example.com ◇ alexmorgan.example

Education

Lakeshore University – Toronto, Ontario **April 2026**
Bachelor of Science in Computer Science

- **Relevant coursework**: Operating Systems, Databases, Distributed Systems, Software Testing.

Experience

Northstar Analytics – Toronto, Ontario **May 2025 – August 2025**
Software Engineering Intern

- Built the account-settings form in React. Kept edits after failed saves and moved keyboard focus to the field that needed attention.
- Fixed duplicate receipts when the payment provider retried a webhook by storing its event ID before sending email.
- Added an index for order-history queries, reducing p95 response time from 800 ms to 120 ms in a load test with 20 concurrent requests.

Lakeshore University – Toronto, Ontario **September 2025 – April 2026**
Teaching Assistant, Introduction to Systems Programming

- Ran weekly labs for 40 students and wrote the autograder tests for the shell assignment, including the pipe and redirection cases students most often got wrong.
- Rewrote the memory-debugging guide after the same three questions recurred in office hours; the next term's lab reports cited it instead of asking.

Projects

Campus Room Booking **March 2026**
Course project; TypeScript, PostgreSQL

- Built room search and booking validation for a four-person course project; prevented overlapping reservations with a database exclusion constraint.
- Tested the booking endpoint with empty, overlapping, and duplicate requests, and kept each failing case as a regression test.

Resumable CSV Importer **November 2025**
Personal project; Python, SQLite

- Moved daily imports to resumable batches so a failed run restarts from the last completed file instead of the beginning.
- Published the code with setup steps, sample data, and a note on the two encodings it does not handle.

Skills

- **Languages**: Python, TypeScript, SQL, C.
- **Frameworks & Libraries**: React, Node.js, FastAPI, pytest.
- **Tools & Platforms**: Git, PostgreSQL, Docker, GitHub Actions, Linux.
