Experience

Company A – City, Region **Month Year – Present**
AI Engineer

- Built retrieval for [user task] over [document collection]; enforced document permissions before returning context and tested cross-user access.
- Created [N] reviewed evaluation cases for [task], including missing evidence and conflicting sources; compared [model or retrieval change] against [baseline] using [scoring rule].
- Added [schema validation] and bounded retries to [model-backed workflow]; sent unresolved cases to [review queue] instead of committing invalid output.
- Reduced p95 response time from [A] to [B] seconds by [change], measured at [concurrency and input size]; rechecked [quality criterion] on a held-out evaluation set.

Company B – City, Region **Month Year – Month Year**
Software Engineer

- Built [API or worker] for [workflow] with [language and database]; tested timeout recovery without repeating [side effect].
- Rolled out [service change] behind [feature flag], monitored [failure signal], and verified rollback before expanding traffic.

Projects

[Document extraction project] **[Month Year]**
Personal project; [Language and tools]

- Extracted [fields] from [document type] with [model]; compared field-level errors against [parser baseline] on [N] held-out documents.
- Published [code and evaluation report] with a runnable sample, model version, and failure cases; labeled results as an offline test.

Skills

- **Languages**: [Language], [Language].
- **AI Tools**: [Model API or inference library], [Retrieval library], [Evaluation tool].
- **Software**: [Database], [Testing tool], [Deployment platform].

Education

[University] – [City, Region] **[Graduation Month Year]**
[Degree and Major]
